LAB ASSIGNMENT (8085)

1. Introduction of 8085-microprocessor kit and steps for execution on the kit.
2. Familiarity with 8085-microprocessor kit.
   - i) Write a program to store 8-bit data into one register and then copy that to all registers.
   - ii) Write a program for addition of two 8-bit numbers.
   - iii) Write a program to add 8-bit numbers using direct and indirect addressing mode.
   - iv) Write a program to add 16-bit numbers using direct and indirect addressing mode.
   - v) Write a program to 8-bit numbers using carry. (using JNC instruction).
   - vi) Write a program to find 1's complement and 2's complement of 8-bit number.
3. Write a program for the sum of series of numbers.
4. Write a program for data transfer from memory block B1 to memory block B2.
5. Write a program for multiply two 8-bit numbers.
6. Write a program to add ten 8-bit numbers. Assume the numbers are stored in 8500-8509. Store the result in 850A and 850B memory address.
7. Write a program to find the negative numbers in a block of data.
8. Write a program to count the number of one's in a number.
9. Write a program to arrange numbers in Ascending order.
10. Calculate the sum of series of even numbers.
11. Write an assembly language program to verify how many bytes are present in a given set, which resembles 10101101 in 8085.
12. Write an assembly language program to find the numbers of even parity in ten consecutive memory locations in 8085.
13. Write an assembly language program to convert a BCD number into its equivalent binary in 8085.
14. Write an assembly language program for exchange the contents of memory location.
15. Write a program to find the largest number in an array of 10 elements.

Steps to perform on the Intel kit as well as on Simulator

- Press Reset
- Press Examine Memory
- Enter starting address
- Press Next
- Enter opcodes by subsequently pressing Next
- Press Reset
- Press Go
- Enter starting address of the program to compile
- Press EXEC/FILL
- Press Reset
- Press Examine Memory
- Enter Output Address
- Press Next

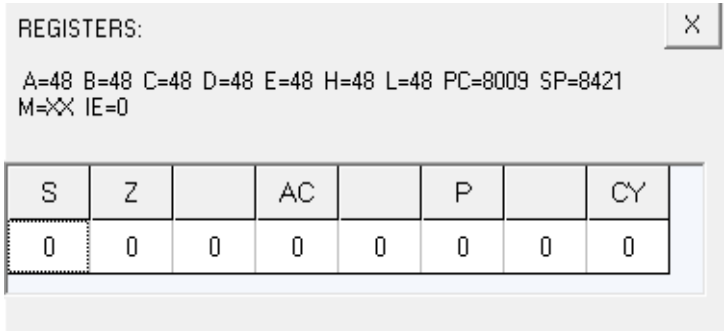
Program No. 2.1: Write a program to store 8-bit data into one register and then copy that to all registers.

Code	Memory Location	Opcode
MVI A, 48	8000, 8001	3E, 48
MOV B, A	8002	47
MOV C, A	8003	4F
MOV D, A	8004	57
MOV E, A	8005	5F
MOV H, A	8006	67
MOV L, A	8007	6F
RST 5	8008	EF



Output –

A – 48, B – 48, C – 48, D – 48, E – 48, H – 48, L – 48

Program No. 2.2: Write a program for addition of two 8-bit numbers.

Code	Memory Location	Opcode
MVI A, 48	8000, 8001	3E, 48
MVI B, 48	8002, 8003	06, 48
ADD B	8004	80
STA 8500	8005, 8006, 8007	32, 00, 85
RST 5	8008	EF

Output –

[8500] – 90

Program No. 2.3: Write a program to add 8-bit numbers using direct and indirect addressing mode.

Code	Memory Location	Opcode
LDA 8500	8000, 8001, 8002	3A, 00, 85
